

## Spanish National Committee NEWS

---

### PROGRESS OF COMMON IDEAS IN THE MEETING OF THE SPANISH ENGINEERING

The Spanish FEANI organization is integrated by the 2 Institutes of Engineering whose presidents are Carlos del Álamo Jiménez and José Javier Medina Muñoz, in a government council just celebrated in November 2017.

This Governing Council, which directly receives the results of the work of the FEANI SNC (Spanish National Committee), has defined herehowthe strategies have to develop to be shared in the international framework. This Council has manifested in its recent annual meeting of presidents (see photo) the importance of the work deployed from the FEANI for the progress of the Recognition and Mobility of Engineers throughout the European Space. The Spanish National Committee is reaching interesting results in dissemination events, initiatives for the competitive progress of engineering and the approach of professionals to convergence in Europe. The FEANI SNC offers to attend all the questions related to European Engineering as the only common interlocutor for these matters, for which, we offer the contact to that end through the address email [snCFEANI@iies.es](mailto:snCFEANI@iies.es) and the web [www.feaniespana.es](http://www.feaniespana.es)

The structure in force of the Spanish National Committee is articulated in a mixed Committee,involved in the international affairs of both institutions, which is formed by 8 members,

- 4 from the IIE (Instituto de la Ingeniería de España): Luis Manuel Tomas Balibrea, Rubén López Pulido, María Nuño Valdés and Rafael Monsalve Romero

- 4 from the INGITE (Instituto de Graduados e Ingenieros Técnicos de España): José Javier Medina Muñoz, Raquel Esteban Pinto, Fco. Javier González Matesanz and David Sedano Abad.

They work together into the Spanish National Committee, to study, update and approve the engineering initiatives in recognition, mobility, etc. for the professionals coming out from the Spanish study programs (Degrees and Masters) of engineering, following the guidelines established by the EMC of the FEANI, review, study and approve the requests of the Eur. Ing.

Update of the INDEX of the Spanish FEANI, convergence of the databases of the FEANI and Eur. Ace, and any new participation in work groups related to the European engineering initiatives. The technical work is supported by the NMC formed, being its Secretary, José M<sup>a</sup> Ramírez Barrios. Likewise, the representatives in the bodies and work groups of the FEANI, which at the moment are David Sedano in the EMC and María Nuño newly appointed in the Ex Board, joined at the last General assembly in this team. We ask to everyone interested to communicate with our Spanish representatives at the international relations to be directed to this team of people, exclusively, in order to obtain responses and solve questions in the framework of European professional engineering.
